

SUMMARY

Software architect with **10+ years** of experience engineering **scalable, performant, and accessible enterprise SaaS** applications. Pioneer in **AI-native engineering**, specialising in building **custom MCP servers, agentic workflows, and automated rulesets** that enforce architectural compliance and drastically **accelerate developer velocity**. Skilled in **system design, performance optimisation**, crafting **CI checks**, and leading **technical transformations** while **mentoring** engineers and collaborating with **cross-functional** stakeholders, looking to lead excellence in an innovative, **product-driven** environment.

SKILLS SUMMARY

Frontend Web Technologies: HTML, CSS, JavaScript, TypeScript, React, Ember, TailwindCSS, Storybook, Figma

Backend & APIs: Java, Ruby on Rails, REST API, MySQL

Performance & Monitoring: Code Splitting, Page Speed Optimisation, Sitespeed, Lighthouse, Chrome DevTools, Apdex, Sentry

Architecture/Strategy: System Design, AI in SDLC, Modular Architecture, Micro-frontends

DevOps & Tooling: CI/CD, Git, GitHub Actions, Jenkins

Leadership: Technical Mentoring, PR Reviews, Agile Practices, Cross-functional Collaboration, Code Standards

WORK EXPERIENCE

Staff Software Engineer, Freshworks

Jul 2017 – Present

- **Architected** and led frontend development of **Freshservice SPA (75k+ customers, 5M+ daily hits)** using **React, TypeScript, Ember, JavaScript**, and **micro-frontend** architecture for modular scalability.
- **Developed** a **production-grade MCP Server ecosystem** integrating **Figma design data** and **AI agents** directly with the **Design System** and **UI Library**, enabling **AI-generated code** to automatically use library components and follow accessibility, folder structure, and translation standards, boosting developer velocity by **40–50%**
- Engineered an **autonomous L4 debugging agent** integrated with internal ticketing systems, built **specialised skills** allowing the agent to parse bug details, **run contextual repository checks**, and deliver **precise RCA** alongside **actionable code fixes**.
- Enhanced product **performance** by cutting **page load time** from **12s to 4s** by minimising **API calls**, implementing **incremental loading, code splitting**, memory leak fixes, leveraging **service worker caching** and **preload/prefetch/defer** strategies, significantly boosting **APDEX** scores.
- Developed standardised **Cursor Rules** to **automate** module setup and repetitive UI flows (e.g., list page generation), empowering **AI-assisted development** of React code, **cutting** engineering **bandwidth** spent on boilerplate by **~50%**
- Championed complex **tech migrations** (e.g., jQuery/RoR to **React/Ember**) for **4 core modules** in the product, whilst enhancing **UI/UX, cross-browser compatibility, accessibility**, and **API** efficiency while **improving p95 load times by 45%**
- Mentored **10+** engineers across squads, conducted **PR code reviews**, and defined application **codebase quality** by implementing robust **CI checks** (used every day by **400** engineers) for **accessibility, linting, test coverage(90%), build size** monitoring, **storybook** documenting, and **SVG optimisations**, etc.
- Scaled engineering **velocity by 20%** across **3** revenue-generating **products** by building **reusable components** for the **UI component libraries**, working with product managers and **designers** daily.
- Owned **full development lifecycle**: defining roadmap, requirements gathering, **scoping, system design**, grooming, **estimation**, API contracts, development, release planning, post-release monitoring (**APDEX, Heap, feature usage**) using **agile** methodologies.
- Strengthened **platform security** by mitigating **200+ vulnerabilities**, including **XSS, CSRF**, and other attack vectors. Conducted regular **security audits** to detect and address risks, ensuring **application compliance with modern security standards**.
- Fostered **cross-functional collaboration**, aligning **frontend, backend, design, product, platform, analytics** and **QA** teams through **structured communication**, clear documentation, and effective sprint rituals.

Software Engineer - Fullstack, Bounteous

Sep 2015 – Jun 2017

- Built **hybrid** apps with Ionic (AngularJS, Node.js) and web apps using Visualforce, Apex, and JavaScript, designing RESTful integrations between Salesforce and external systems while adhering to ISV standards.
 - Delivered **time-sensitive**, scalable solutions for **multi-time-zone** clients, ensuring optimal performance and user experiences.
-

HONORS & AWARDS

- **Customer Champion**, True Friend of the Customer (x2), **Exceptional Individual Performer**, **Agility** Through Empowerment, **Above & Beyond** (x2), Certificate of Achievement – **Craftsmanship**, Spot Award (x4), Happy Work Environment - **Freshworks**
 - Individual **Spot Award** (x2) - **Bounteous**
-

CERTIFICATIONS

- **Web Design Accessibility** by Udemy
 - **Typescript** by Great Learning
 - **Learn React** by CodeAcademy
-

EDUCATION

Bachelor of Engineering, SSN College of Engineering, Anna University

Apr 2015

- GPA: 8.73/10, **First Class** with **Distinction**
